

## *Lead Backend Developer*

At Woffu, we bet on "liquid work". The fluidity of internal processes help companies improve the relationship with their employees, generating an efficient and pleasant work environment. Manage vacations, absences, presences and shifts is a very complex task. Woffu is a SaaS / cloud-based software that solves this problem by contributing directly to facilitate the life of employees, team leaders and Human Resources departments.

Our history began in 2015 and our growth since then has been staggering - 400% in 2017 - generating general interest. With a team of 15 highly-motivated people, more than 450 clients and a 0% churn rate, our project has just started and we want to build the right team to capitalize on this huge potential.

We are currently present in Spain, and expanding internationally.

We're looking for a talented and passionate Lead Backend Developer to join our product team in Barcelona. As a high-growth organization, we need an architecture that scales in a big way.

### Your missions

- Participate in the development and improvement of the backend infrastructure
- Develop new functionalities in the product
- Contribute to unit & functional testing
- Be the relay of the founder-CTO to the future of the backend

### Your profile

- 4 to 7 years of proven experience as a Software Engineer
- Familiarity with Agile development methodologies
- Design patterns and clean code
- Cloud services experience

- Strong C#, ASP.NET Web API experience
- Lead in BackEnd technologies and architecture decision-making
- Knowledge of using Visual Studio Team Services
- Great experience in SQL Server database development
- Experience writing Unit Tests for the .NET Framework
- Knowledge of web technologies such as JQuery, HTML, Ajax, Javascript and JSON
- Experience integrating software components and third-party programs
- Create technical documentation for reference and reporting
- Analytical and methodical working style person
- Great team player
- High level of English

## Your pluses

- Microsoft Azure Cloud Services
- Experience with NoSQL databases (MongoDB, Cassandra, CosmosDB...)
- Continues integration experience (TFS)
- Single page applications (Angular js)
- Knowledge of Real-time functionality with SignalR

## Our pluses

- A startup located in the heart of Barcelona
- Mac or PC, choose your favorite environment
- Be at the beginning of a great adventure
